NAME
     memmove -- copy byte string

LIBRARY
     Standard C Library (libc, -lc)

SYNOPSIS
     #include <string.h>

     void *
     memmove(void *dst, const void *src, size_t len);

DESCRIPTION
     The memmove() function copies len bytes from string src to string dst.
     The two strings may overlap; the copy is always done in a non-destructiv
e
     manner.

RETURN VALUES
     The memmove() function returns the original value of dst.
